A FLUID DISPENSER

5 A fluid dispenser comprising a first fluid dispenser
member (1) associated with a first fluid reservoir (15),
said first member comprising a first actuating rod (11)
mounted to move along a first rod axis between a rest
position and an actuated position, and a second fluid
10 dispenser member (2) associated with a second fluid
reservoir (25), said second member comprising a second
actuating rod (21) mounted to move along a second rod
axis between a rest position and an actuated position,
the first rod (11) having a free end (111) pointing in a
15 first direction and a second rod (21) having a second
free end (211) pointing in a second direction, the two
members being disposed one relative to the other with the
first and second rod axes extending parallel and with the
first direction being opposite to the second direction,
20 so that one dispenser member is disposed upside down
relative to the other dispenser member, said fluid
dispenser being characterized in that at least one of the
reservoirs is an "airless" reservoir, with its volume
decreasing as fluid is extracted therefrom.
